

2001 N.A.L.G.A. Award for Best Special Project

Large Shop:

City of San Jose, California

*A Vulnerability Assessment of City Hall Building
Security*

The panel agreed that the outstanding project was submitted by the City of San Jose regarding [A Vulnerability Assessment of City Hall Building Security](#). The project addressed the concerns of a council member regarding the safety of the visiting public and employees located at City Hall. The project team successfully completed the project and responded to the council member's request in two days. The use of an almost completely visual presentation significantly reduced the time necessary to issue the report, without sacrificing the intended audience's understanding of the issues. Additionally, the implementation of many of the audit recommendations, within only one month of the report's issuance, speaks to the project's success.

Congratulations from N.A.L.G.A.!
